

Remarks,

(a) The enclosed claims accurately disclose this invention "Locking Leveling Support Legs for Wheelbarrow" now having reached significant commercial success.

(b) Further the mechanism "Locking Leveling Support Legs For Wheelbarrow" in universal kit form is broken down in multiple parts for packaging, but conform to the same claims novel in automatic leveling and automatic locking-unlocking accomplished by up and down moving axis point change of cradle-leg axle in vertical slots in cupped yoke undercarriage support.

(c) Further the mechanism "Locking Leveling Support Legs For Wheelbarrow" in the simplest working form has (1), a Cradle-leg member having portions left and right feet, an upward edge with locking teeth, and a mounting axle. (2), a cradle-leg supporting yoke comprising, upward attaching flanges, and a singular stationary locking pin.

(d) Further some adaptations add extra stiffeners or braces in accordance to customer needs but conform to the same self-locking self-leveling novelty in claims.

Very Respectfully

Larry E. Davis
